CAREER OBJECTIVE

AI and DL enthusiast with hands-on experience in Python, Java, Software Development, Machine Learning, Large Language Models, Computer Vision, Deep Learning, and Edge AI, with practical expertise in developing, evaluating, and deploying YOLOv8-based vision models on edge hardware. I am eagerly looking forward to apply my knowledge of machine learning and programming skills on real-world problems and develop practical, impactful solutions.

TECHNICAL SKILLS

Programming Languages : Python, Java, C
Machine Learning : Pandas, NumPy, Scikit-Learn, Preprocessing, Model Evaluation
Deep Learning : TensorFlow, Keras, CNN, Pytorch, YOLO, LLMs, LSTM, Autoencoders
AI and Edge Tools : OpenCV, ONNX, Hailo-8, Raspberry Pi 5 AI HAT+, Git, Docker, AWS

SOFT SKILLS

- Leadership
- Adaptability
- Problem Solving
- Resilience

EDUCATION

BTech – Computer Science and Business Systems
Francis Xavier Engineering College | 2023 – 2027
CGPA: 8.61

Maths Computer Science
Little Flower Matric Higher Secondary School
Percentage: 88.2%

INTERNSHIPS

AI DEVELOPER , PROFIT.CO, MADURAI (July - September 2026)

- Developed AI-powered features and automation solutions using LLMs and APIs.

Machine Learning Intern , IIT ROPAR, ONLINE (May - August 2026)

- Developed and implemented an AI/ML-based solution as part of an IIT internship, gaining hands-on experience in real-world machine learning and model training.

ML Intern, CORIZO PRIVATE LIMITED, Bangalore (June - August 2024)

- Worked on machine learning concepts using Python and model implementation.
- Performed data preprocessing and basic predictive analysis tasks.

AIML In-plant Training, CodebindTechnologies, Coimbatore (May - June 2024 *)

- Gained exposure to artificial intelligence and machine learning workflows.

ACHIEVEMENTS

- First Prize — VISAI Hackathon 2026
- First Prize — Aatral Project Expo
- First Prize — Gracevity Project Expo
- First Prize — NGC Tirunelveli Quiz
- Second Prize — PCI Coder's Battle
- Third Prize — QModelX Hackathon
- Active Google Student Ambassador 2025

PROJECTS

Seraph Zenith (AI-Powered Drone Vision & Edge AI System)

Tech Stack: Python, PyTorch, YOLOv8, OpenCV, ONNX, Hailo-8, Raspberry Pi 5 AI HAT+

- Developed a real-time computer vision system using deep learning for aerial object detection, environmental hazards recognition, and stranded-victim detection from RGB imagery. Converted YOLOv8 models to ONNX and deployed/tested them on Hailo-8 using Raspberry Pi 5 AI HAT+, validating the model for edge-based inference and real-time deployment.

Results: 86.2% mAP@50 on a held-out test set, 43.5 FPS on RTX 3050; exported to ONNX and deployed on Hailo-8.

Smart Thermal Analysis for Chips

Tech Stack: Python, GCN, U-Net, SVR, Machine Learning, Graph Neural Networks

- Developed UniGraphNet, a hybrid GCN–U-Net–SVR model to predict chip thermal hotspots from synthetic power-density data using spatial graph modeling and multi-scale feature extraction.

Smart Home Anomaly Detection

Tech Stack: Python, TensorFlow, Pandas, Scikit-learn, Matplotlib, Tkinter, Twilio , Data Visualization

- Developed a deep learning–based IoT anomaly detection system using Autoencoder and LSTM models to identify unusual patterns in multi-sensor time-series data such as temperature, humidity, energy, light, motion and door events.

Geospatial Boundary Surveillance for Coastal Fishermen

Tech Stack: ESP32/Arduino, Embedded C, Python, GPS (NEO-6M), LoRa (SX1278), Geofencing, Haversine Formula, TinyGPS++

- Developed an offline-capable real-time geospatial surveillance system using GPS and LoRa to track fishing vessels and calculate proximity to predefined maritime boundaries.

Results: Prototype achieved <3 m GPS error and successful LoRa packet delivery up to 12 km over open water during testing.

CERTIFICATIONS

NPTEL | Introduction to Internet of Things, The Joy of Computing using Python
AWS | Developing Machine Learning Solutions
DeepLearning.AI | Neural Networks and Deep Learning
Google | Foundations of Project Management
Deloitte| Data Analytics Job Simulation
